

## Telcordia Network Solutions Test Outsourcing Services

001  
Verify market-readiness of  
products and prototypes

002  
Confirm functionality during  
any production phase

003  
Work with the industry's  
testing leader

**Embrace an  
Innovative Approach**

**Transform Your  
Challenges into  
Business Benefits**

For both carriers and suppliers, equipment testing is never optional. Suppliers need to be able to assure the marketplace that their products are reliable, interoperable, and ready for deployment. Service providers must be confident that new products and technologies have been properly installed and integrated before going live.

Testing, however, requires extensive knowledge of multiple technologies and interaction issues, as well as sophisticated testing equipment and simulated infrastructures. Telcordia Technologies is known throughout the industry for its work assisting suppliers and service providers with the full range of test planning, design, and execution in both laboratory and live environments.

Our extensive, fully customizable testing services fall within the areas of:

### **Network Integrity Services**

Integrity services test the performance of suppliers' products and prototypes under the full range of normal to extreme environmental conditions. No one does this testing better than Telcordia, which developed the industry's network equipment building standards criteria, Telcordia® NEBS™ testing. Our Fiber Media and Components Laboratory is used by all major service providers to test optical equipment, including products to be used in Fiber To the Premises (FTTP) deployments.

### **Performance Testing Services**

We maintain one of the most advanced testing labs in the world, with the capabilities to replicate an entire network. Tests can be designed for any phase in the product life cycle to verify functionality, performance, and compatibility. When a product is deployed in the field, we can continue to test performance and reliability on an ongoing or event basis.

Telcordia has an unparalleled track record of performing laboratory, in-network, and environmental testing, which helps suppliers and service providers to achieve:

- Verifiable product quality, reliability, and performance
- Proven interoperability in multitechnology, multivendor infrastructures
- Cost-efficiencies over in-house testing
- Significant savings by avoiding re-work and deployment delays.

### **The Telcordia Network Solutions Services Service Line**

Our name is synonymous with network expertise. Whether you're building or reengineering, we can support you with planning, design, integration, and engineering across multiple technologies. We also show you how to draw maximum value from your assets with capacity planning, traffic analysis, testing, and security and fraud management.
